

TUNE INTO EVERYDAY SAVINGS

Just like a car, properly maintaining your heating and cooling equipment is essential to its efficiency and performance. For example, a well-maintained heat pump is around 10–25 percent more energy efficient than one that receives no or little maintenance.*

If your central air conditioner or air-source heat pump isn't working as well as it should, a professional tune-up can help lower your energy costs and lead to longer-lasting, better-working equipment. Plus, ComEd offers a \$25 rebate for qualifying tune-ups.

Only one unit per household, per year, qualifies. Customers are eligible for tune-ups every three years. All equipment must be a minimum of three years old to qualify.

Schedule yours today and tune up your savings.

WHY GET A TUNE-UP?

- **Lower cooling costs.** Your Service Provider will replace the unit's filter during the tune-up. Replacing or cleaning a dirty filter can reduce your air conditioning unit's energy use up to 15 percent.* ENERGY STAR® recommends that this is done once every three months.**
- **Longer equipment lifespan.** Your Service Provider will adjust refrigerant levels if needed. Incorrect refrigerant levels can lower efficiency by 5–20 percent and lead to costly, unnecessary breakdowns.**
- **Improved indoor air quality.** Your Service Provider will clean the system as necessary. Removing trapped dirt and dust improves the speed and quality of airflow through your equipment.**
- **\$25 ComEd rebate.** See if your system qualifies.

BE COOL

Schedule a tune-up with a ComEd Service Provider today or visit [ComEd.com/HeatingCooling](https://www.comed.com/HeatingCooling) for details.
